

BASIC PROPERTIES

- Silicon material is a semi-conductor.
- Its electrical conductivity is a lot inferior than metal ones.
- It is not soluble in water (except at high temperature).
- Silicon is attacked by hydrofluoric acid (HF) or mixed hydrofluoric and nitric (HNO₃) depending on its phase.
- The electrical conductivity of semi-conductor is between the insulators ones, and metal ones.

APPLICATIONS

Semi-conductors
Photovoltaic
Mechanical components
Aerospatial
